

## FORWOOD – THE COMPLETE FORESTRY PACKAGE

Forwood Forestry Ltd. is an integrated forestry company, which provides a complete forestry package from forest establishment and management to the revenue generation stage when road construction, harvesting and sale of logs are required.

**E**stablished in 2005, Forwood provides a unique, transparent service in the management and thinning of crops for private forest owners.

### TRANSPARENCY

There is no annual management fee as the company organizes the management of the crop for a commission of the net profit from timber sales from thinning through to clearfell. This system facilitates

the clustering of large and small plantations which reduces the harvesting and extraction costs for owners who remain in full control of their plantations at all times. Timber removal is controlled through the forest docket system, which ensures full transparency for the owner.

Peter Alley of Forwood points out that the objectives of the owner and the company are aligned as regards the correct management of the crop. The main aim is to maximize returns from the final harvest as efficiently and quickly as possible, through well-planned thinnings, which guarantee a regular income for the owner. The management service operated by Forwood is the only one of its kind in Ireland, but is derived from standard practice in other major timber producing regions. Of significant benefit to owners is the price premium, which will be achieved through the group selling of logs.

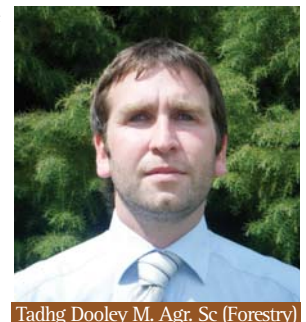

### MARKETS

Jim Hurley of Forwood maintains that sawmills and the emerging wood fuel sectors prefer to purchase large quantities from a single source rather than small quantities from individual growers. Forwood Forestry Ltd. is not the purchaser of the timber, which is a crucial point for the owners. The company provides finance to complete harvesting and delivery of the raw material ensuring the owner has to provide no working capital. It also enables the company to plan harvesting and management over the long term, which combats the difficulties in managing fragmented forest holdings.

Through its team of locally based foresters and proven established outlets for all timber products, combined with a harvesting and haulage infrastructure, Forwood provides all the ingredients and expertise for successful and profitable forest establishment and management for private growers including farmers.
